

Bite Evidence Observation Sheet

A skin mark alone cannot identify a pest. This sheet is not a medical or pest diagnosis.

Record

- ☐ Date, time and property location.
- ☐ Recent travel, guests, used furniture, pets and outdoor exposure.
- ☐ Rooms and places where marks or actual insects were noticed.

Look for environmental evidence

- ☐ Specimen photographed with scale.
- ☐ Bed spotting or shed skins, flea dirt, attached tick, larvae or standing water.
- ☐ Close and wider context photographs.

Safety boundary

- ☐ Do not approach a hazard for a better photograph.
- ☐ Use qualified medical care for symptoms or severe reactions.
- ☐ Do not send unnecessary sensitive health information to a pest service.
